

# *The Implementation of the Thesaurus of Greek Terms of the National Documentation Centre in SKOS*

Georgia Solomou

Dimitrios Koutsomitropoulos

High Performance Information Systems Laboratory  
University of Patras

# Thesaurus of Greek Terms

- ▶ Published by the National Documentation Centre of Greece (EKT)
- ▶ The **first** published thesaurus in Greek
- ▶ Controlled vocabulary covering general terminology
- ▶ Aiming at use/exploitation by Hellenic Libraries and Information Centres
- ▶ Bilingual terms (Greek, English)
- ▶ Representation of both vertical (hierarchical) and horizontal associations between concepts

# Terminology

- ▶ Multi-subject thesaurus
  - Aims at covering subjects for all Hellenic Libraries (various scientific fields)
- ▶ Based on:
  - the National Library of Greece subject headings
  - subject terms used by other Hellenic Libraries
  - ⇒ Focusing on issues of Greek and European interest
  - ⇒ Expanded with medical terminology
  - ⇒ Working on expansions on more scientific fields
- ▶ Terms specialization based on the Greek translation of the 13<sup>th</sup> version of the Dewey Decimal Classification system

# Standards

- ▶ Follows international standards like:
  - ISO 2788 Documentation - guidelines for the establishment and development of monolingual thesauri, 1986
    - ΕΑΟΤ 1321:1993 (in Greek)
  - ISO 5964 Documentation - guidelines for the establishment and development of multilingual thesauri, 1985
- ▶ Other established standards for determining subjects and indexing terms were studied (e.g. ΕΑΟΤ 1312)

# Exploitation

- ▶ A number of Public and Academic Libraries in Greece exploit the EKT thesaurus
  - e.g. **Thir@** - Portal of the Library and Information Centre of the University of Macedonia
- ▶ Incorporation in the Hellenic Public Libraries Union Catalogue
  - A unified catalogue comprising titles from all Hellenic Public Libraries
  - Provided search service powered by EKT

ΠΑΙΔΕΙΑ ΜΠΡΟΣΤΑ  
21 Επιχειρησιακό Πρόγραμμα  
Εκπαίδευση και Αρχαίες  
Επαγγελματικές Κατάρτισης

Το έργο "Ολοκλήρωση των Έργων των Κινητών Βιβλιοθηκών - Εθνικό Κέντρο Τεκμηρίωσης/ΕΙΕ" συγχρηματοδοτείται κατά 80% από την Ευρωπαϊκή Ένωση - Ευρωπαϊκό Κοινωνικό Ταμείο και κατά 20% από το Ελληνικό Δημόσιο (Επιχειρησιακό Πρόγραμμα "Εκπαίδευση & Αρχική Επαγγελματική Κατάρτιση", Γ' ΚΠΣ).

# Structure

- ▶ Based on a common subject thesaurus structure (enriched with extensions):
  - Expresses three types of relationships between terms:
    - **Hierarchical** (Broader/Narrower /Microthesauri Term – **BT, NT, MT**)
    - **Associative** (Related Term - **RT**)
    - **Equivalence** for synonyms (SYN) (**Used For - UF**)
  - English translations included (**English Term - ET**) (some derived from Eurovoc Thesaurus)
    - ⇒ Bilingual terms
  - Correspondence to the **Dewey Decimal Classification** system (**DDC**)

# Term Structure

## XML format

```
<TERM>
  <CONTEXT>αστικά δικαστήρια</CONTEXT>

RT	1. αστικό δίκαιο SYN: κοινό δίκαιο 2. πολιτική δικονομία SYN: αστικό δικονομικό δίκαιο
SYN	1. πολιτικά δικαστήρια

# About SKOS

- ▶ A W3C Proposed Recommendation (June 2009)
- ▶ A formal language for representing any type of structured, controlled vocabularies
  - A practical application of RDF (and RDFS )
  - ⇒ A **machine-understandable** representation framework for Knowledge Organization Systems (KOS)

## W3C Document Process

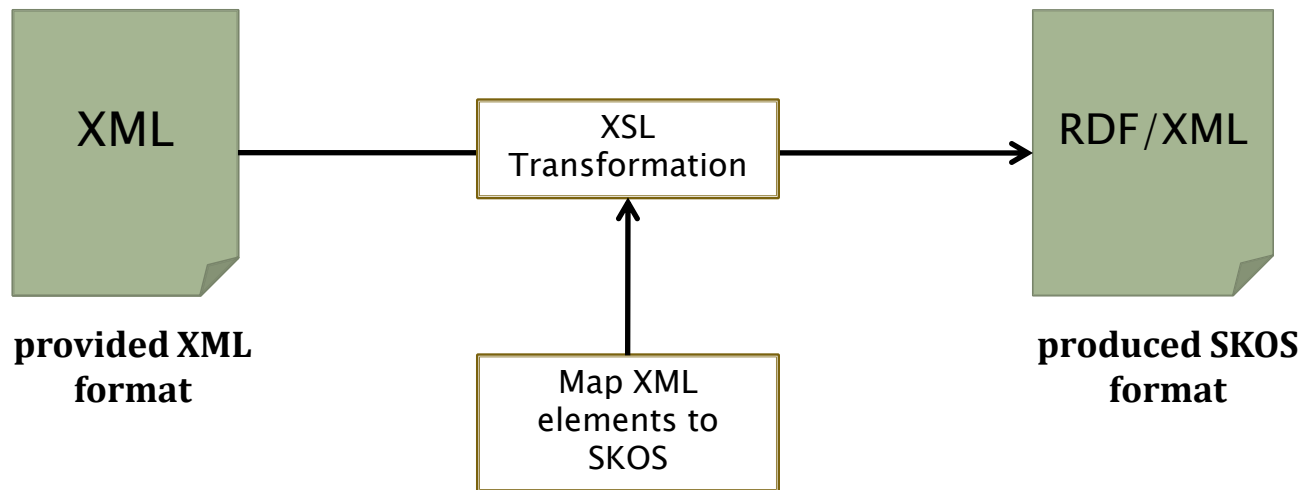

# About SKOS

- ▶ Aims at bringing KOS in the distributed and decentralized environment of the World Wide ***and Semantic Web***
  - An application of the library science to the Semantic Web
- ▶ A KOS is represented as a **concept scheme** comprising of a set of **conceptual resources (concepts)**
  - Description of concepts (identified by URIs)
  - Hierarchical and associative relations
- ▶ Multilingual and extensible model

# The SKOSification of the EKT thesaurus

- ▶ Manually map XML elements of thesaurus to SKOS notions
- ▶ Creation of the corresponding XSL Transformation
- ▶ Application of XSLT document to XML file

# EKT XML Format Description

**<TERM>** - all information about a term is contained in a term element

**<CONTEXT>** - the name of the term

**<USER>** - a fixed value ("EKT")

**<MT>** - a broader category to which this term belongs

**<ET>** - term's English translation (may repeat)

**<BT>** - refers to a term with broader meaning (may repeat)

**<NT>** - refers to a term with narrower meaning (may repeat)

**<UF>** - a synonym (may repeat)

**<RT>** - refers to a term with related meaning (may repeat)

**<SN>** - description of the term (may repeat)

**<dewey>** - correspondence to dewey decimal classification system (may repeat)

# The Thesaurus as a concept scheme

- ▶ The EKT Thesaurus is considered as a SKOS *concept scheme* (*an aggregation of concepts*)
  - A concept scheme resource is described using Dublin Core (DC) metadata
  - `skos:topConcept` links a concept scheme to the most general concepts it contains
  - It is linked with the concepts it contains using the `skos:inScheme` property
  - (e.g. `ekt:conceptA skos:inScheme ekt:thesaurusA`)

<rdf:RDF>

<skos:ConceptScheme rdf:about="http://www.hpclab.ceid.upatras.gr/skos/EKT\_THESAURUS">

<dc:title>Thesaurus of Greek Terms</dc:title>

<dc:description>

The Thesaurus of Greek Terms, published by the National Documentation Centre (EKT) in Greece, in SKOS format

</dc:description>

<dc:creator>

High\_Performance Information Systems Laboratory (HPCLab)

</dc:creator>

<dc:contributor>

High Performance Information Systems Laboratory (HPCLab)

</dc:contributor>

<dc:date>2009-01-10</dc:date>

<dc:language>el,en</dc:language>

<skos:hasTopConcept>Στρατός</skos:hasTopConcept>

</skos:ConceptScheme>

# Mapping of XML elements to SKOS notions

- ▶ **<TERM>** - becomes a SKOS **concept**
  - A base URI is assigned:  
`http://www.hpclab.ceid.upatras.gr/skos/ekt#context`
  - Concept's URI is formulated by the base URI plus `<context>` value:  
`<skos:Concept rdf:about="URI+CONTEXT_value"></skos:Concept>`
- ▶ **<USER>** - indicates creator/holder (EKT)
  - Expressed in the concept scheme's metadata
- ▶ **<CONTEXT>** - constitutes the preferred label in Greek ⇒  
`<skos:prefLabel xml:lang="el">CONTEXT_value</skos:prefLabel>`

# Mapping of XML elements to SKOS notions (2)

- ▶ **<MT> - Microthesauri Term:** refers to a top (broader) term

- Top concept in the EKT concept scheme ⇒

`<skos:hasTopConcept>MT_value</skos:hasTopConcept>`

- Expressed using an indirect hierarchical (broader) link to the described term ⇒

`<skos:broaderTransitive rdf:resource="URI+MT_value"/>`

- ▶ **<ET> - English Term** used for the term's English translation

⇒

`<skos:prefLabel xml:lang="en">ET_value</skos:prefLabel>`

If more than one **<et>** terms exist:

`<skos:altLabel xml:lang="en">ET_value</skos:altLabel>`

# Mapping of XML elements to SKOS notions (3)

*(Hierarchical relationships)*

- ▶ **<BT> - Broader Term:** asserts a direct (broader) link between the described term and the `<bt>` value (term) ⇒  
`<skos:broader rdf:resource="URI+BT_value"/>`
- ▶ **<NT> - Narrower Term:** asserts a direct (narrower) link between the described term and the `<nt>` value (term) ⇒  
`<skos:narrower rdf:resource="URI+NT_value"/>`

*(Associative relationships)*

- ▶ **<RT> - Related Term:** refers to a term that relates to the described one ⇒  
`<skos:related rdf:resource="URI+RT_value"/>`

# Mapping of XML elements to SKOS notions (4)

*(Equivalence)*

- ▶ **<UF> - Used For:** indicates a (quasi-)synonym ⇒

`<skos:altLabel lang="el"> URI+MT_value </skos:altLabel>`

*(Documentation)*

- ▶ **<SN> - Scope Note:** explanation of the term's intended meaning ⇒

Corresponds to `<skos:Note>`

- Subproperties: `<skos:scopeNote>`, `<skos:example>`,  
`<skos:historyNote>`, `<skos:editorialNote>`,  
`<skos:changeNote>`, **`<skos:definition>`**

`<skos:definition xml:lang="el">SN_value</skos:definition>`

# Mapping of XML elements to SKOS notions (5)

- ▶ **<DEWEY>** - A unique identifier based on the Dewey Decimal Classification system

- Represented by **<skos:notation>**:

- used with a typed literal
- datatype URI assigned:

<http://dewey.info/schema-terms/Notation>

```
<skos:notation rdf:datatype="http://dewey.info/schema-terms/Notation">387.733 48</skos:notation>
```

# Mapping Summary

XML element	SKOS notion
<TERM>	<skos:Concept>
<USER>	-
<CONTEXT>	<skos:prefLabel lang="el">
<MT>	<skos:broaderTransitive>
<ET> (first)	<skos:prefLabel lang="en">
<ET>	<skos:altLabel lang="en">
<BT>	<skos:broader>
<NT>	<skos:narrower>
<RT>	<skos:related>
<UF>	<skos:altLabel lang="el">
<SN>	<skos:definition>
<DEWEY>	<skos:notation>

# Problems with the EKT thesaurus

- ▶ Inconsistency among hierarchical/associative relations
  - identical values for
    - the <bt> and <rt> node, or
    - the <nt> and <rt> node ...  
***in the same <term> !***
- ▶ Cause
  - both `skos:broader` and `skos:narrower` properties are disjoint with `skos:related`

# Example and Solution

## ⇒ *Solution*

- only one type of relation was kept
  - According to the description of the problematic term (referred as broader or narrower)
- Manually fixed 15 terms

## Example

Term: government  
BT: central administration  
RT: central administration

Term: central administration  
NT: government  
RT: (no related term  
“government”)

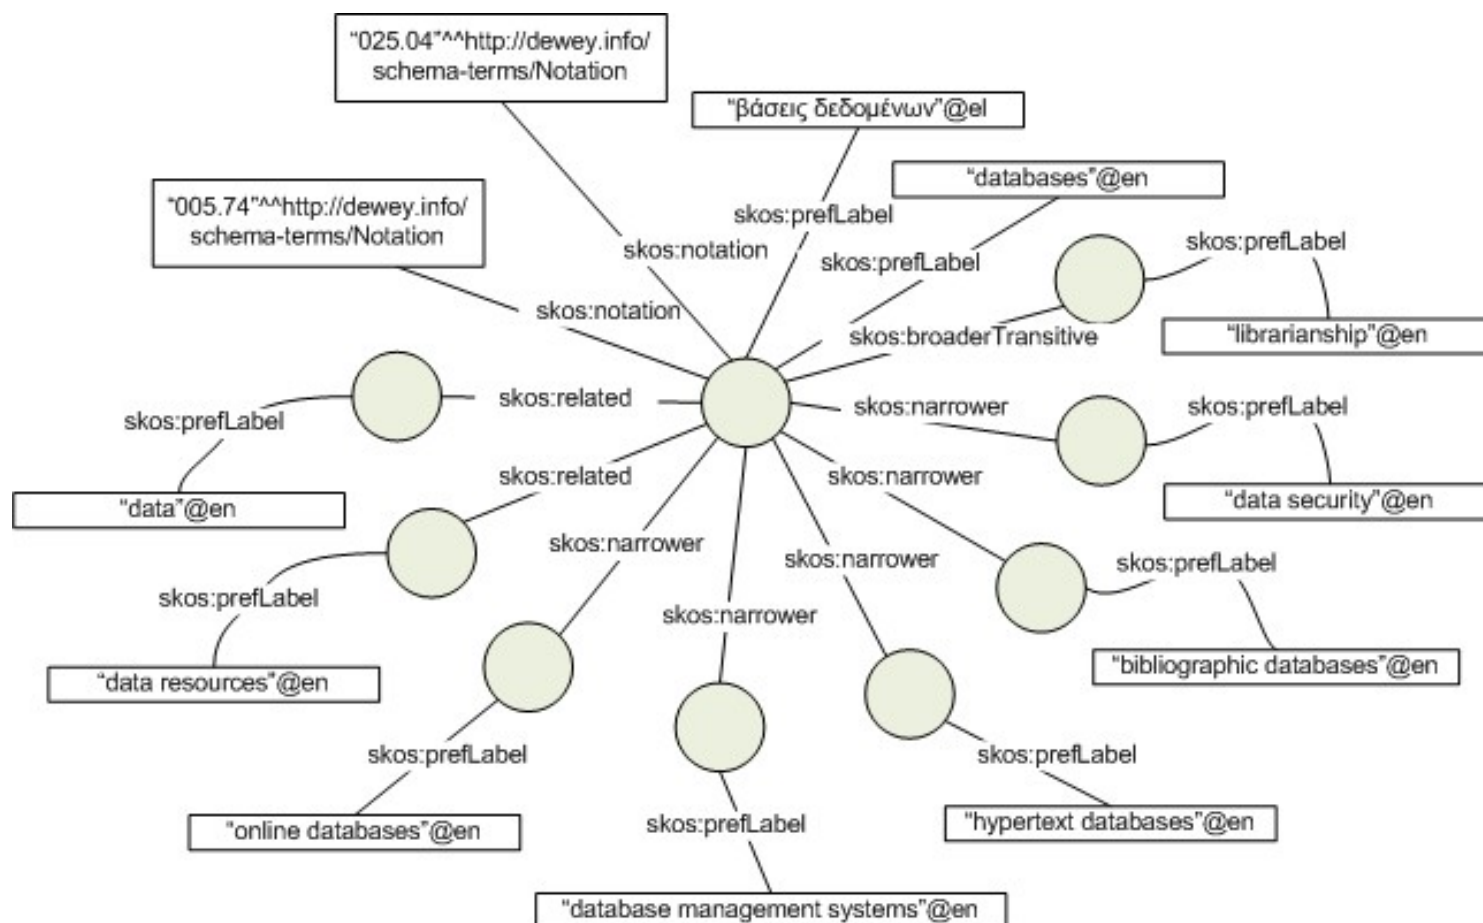

deletion of RT “central administration”  
from term “government”

# The RDF/XML Format of the SKOS Thesaurus

Term: “databases”@en  
“βάσεις\_δεδομένων”@el

```
<skos:Concept rdf:about="http://www.hpclab.ceid.upatras.gr/skos/ekt#βάσεις_δεδομένων">  
  <skos:prefLabel xml:lang="el">βάσεις δεδομένων</skos:prefLabel>  
  <skos:prefLabel xml:lang="en">databases</skos:prefLabel>  
  <skos:broaderTransitive rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#Βιβλιοθηκονομία"/>  
  <skos:narrower rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#ασφάλεια_δεδομένων"/>  
  <skos:narrower rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#βιβλιογραφικές_βάσεις_δεδομένων"/>  
  <skos:narrower rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#συστήματα_διαχείρισης_βάσεων_δεδομένων"/>  
  <skos:narrower rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#βάσεις_δεδομένων_υπερκειμένου"/>  
  <skos:narrower rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#επιγραμμικές_βάσεις_δεδομένων"/>  
  <skos:related rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#πηγές_πληροφόρησης"/>  
  <skos:related rdf:resource="http://www.hpclab.ceid.upatras.gr/skos/ekt#δεδομένα"/>  
  <skos:notation rdf:datatype="http://dewey.info/schema-terms/Notation">005.74</skos:notation>  
  <skos:notation rdf:datatype="http://dewey.info/schema-terms/Notation">025.04</skos:notation>  
</skos:Concept>
```

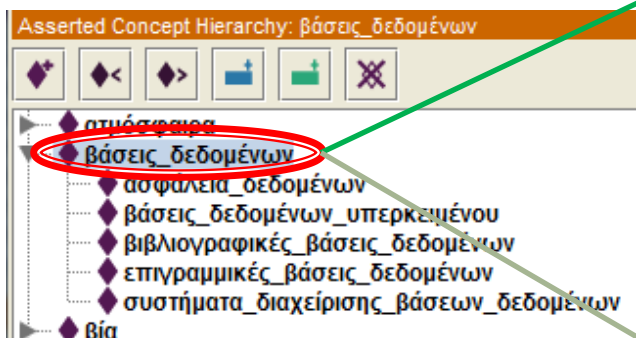

# Visualization of a Term

# The EKT thesaurus through Protégé 4 and SKOSed plugin

Concept Hierarchy for the term  
“Βάσεις Δεδομένων”@el (*Databases*)

Asserted data properties (*SKOS labels, etc*)

SKOS Data Property Assertions: βάσεις_δεδομένων	
SKOS preferred label +	
prefLabel	"βάσεις δεδομένων"@el
prefLabel	"databases"@en
SKOS notation +	
notation	"005.74"^^http://dewey.info/schema-terms/Notation
notation	"025.04"^^http://dewey.info/schema-terms/Notation

Asserted object properties (*broader, narrower...*)

Other property assertions +	
narrower	ασφάλεια_δεδομένων
narrower	βιβλιογραφικές_βάσεις_δεδομένων
narrower	επιγραμμικές_βάσεις_δεδομένων
narrower	βάσεις_δεδομένων_υπερκειμένου
broaderTransitive	Βιβλιοθηκονομία
narrower	συστήματα_διαχείρισης_βάσεων_δεδομένων

# Worth SKOSifying?

- ▶ It is a W3C Proposed Recommendation (June 2009)  
⇒ (almost) a **standard**!
- ▶ A data model producing descriptions in a **machine readable** format
- ▶ A means to achieve **interoperability**  
*“SKOS... enables data and technology sharing across diverse applications”*
- ▶ SKOS data model implemented in OWL
  - Rich semantic relations, constructs and *axioms*
  - Provide for **reasoning** and **inferences**
  - Brings KOS to the Semantic Web reality

# OWL axioms for SKOS

- ▶ `skos:broader (skos:broaderTransitive)` **is inverse of** `skos:narrower (skos:narrowerTransitive)`
- ▶ `skos:topConceptOf` **is inverse of** `skos:hasTopConcept`
- ▶ `skos:broaderTransitive/skos:narrowerTransitive` **are transitive**
- ▶ `skos:broader (skos:narrower)` **is subproperty of** `skos:broaderTransitive (skos:narrowerTransitive)`
- ▶ `skos:related` **is symmetric**

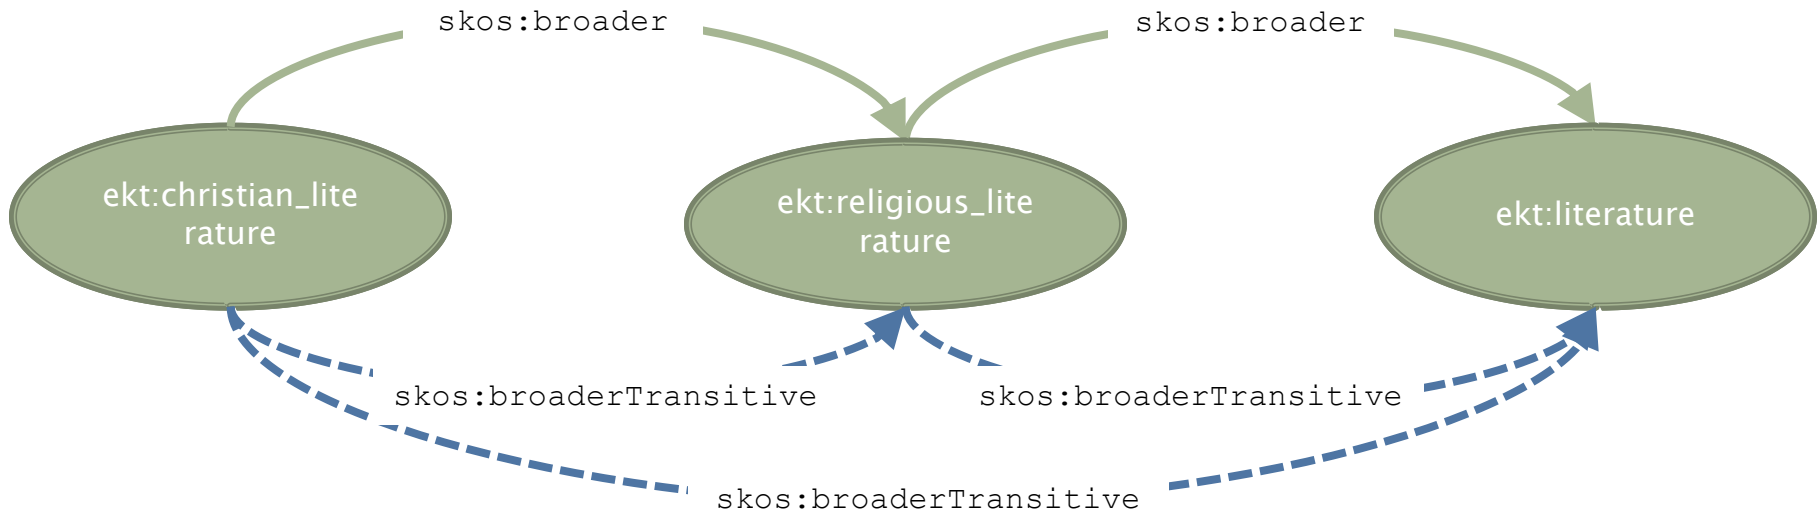

# Inference Example

**Example 1** –symmetric relation `skos:related`

# Inference example (2)

**Example 2** – transitive relation `skos:broaderTransitive`

# Worth SKOSifying?

- ▶ A widely adopted standard  
e.g. Library of Congress Subject Headings are expressed in SKOS  
( on-line at <http://id.loc.gov/authorities/>)

# Library of Congress in SKOS

Term: “Ad hoc networks (Computer networks)”@en

## Ad hoc networks (Computer networks)

**URI:** <<http://id.loc.gov/authorities/sh2007004723#concept>>

**Type:** Topical Term

**Alternate Labels:** MANETs (Computer networks); Mobile ad hoc networks; Wireless ad hoc networks

### Broader Terms:

- [Computer networks](#)
- [Wireless communication systems](#)

### Narrower Terms:

- [Cognitive radio networks](#)
- [Vehicular ad hoc networks \(Computer networks\)](#)

### Sources:

```

# About SKOS and OWL 2

- ▶ The SKOS is itself defined as an OWL ontology
  - Each SKOS vocabulary is an instantiation of the SKOS ontology/schema (`skos.rdf`)
- ▶ SKOS in OWL 1.0  $\Rightarrow$  produces OWL Full ontologies
  - Metamodeling
  - Allows for hierarchies of annotation properties
- ▶ (SKOS in OWL DL  $\Rightarrow$  a proposal comprising a subset of the original OWL vocabulary)

# About SKOS and OWL 2

## ► Important Issues

1. There are still a number of semantic conditions that are not expressed formally in this schema, e.g.
  - `skos:prefLabel`, `skos:altLabel` and `skos:hiddenLabel` are pairwise disjoint properties
2. Some semantic conditions cause SKOS ontology to be OWL Full , e.g.
  - `skos:changeNote`, `skos:definition`, ... are each sub-properties of `skos:note` (hierarchy of annotation properties)

## ► Solution

Using constructs allowed only in OWL 2 such as:

- role-chains
- `DisjointObjectProperties`, `subAnnotationPropertyOf`
- *Punning*

Attempts at creating OWL2 axioms for SKOS

<http://apollo.hpclab.ceid.upatras.gr:8001/hpclabwiki/Skos2Owl2>
